

Description

Finance is often defined simply as the management of money. This can relate to the finances of individuals and families, of businesses, and of governments. It can include consideration of investment risks. Retail, investment and other banks offer financial services which are designed to assist with money management, making them an important part of a financial system. Finance is the study of how individuals, businesses, and organizations acquire and utilize capital. Two basic elements of finance include the tradeoff between expected returns and risk and the importance of timing of future cash flows.

The Finance and Banking bachelor degree focuses on the related fields of banking and finance, and gives students the skills to manage money in businesses, organizations, companies and individuals. At Nam Can Tho University, students in the training major of Finance and Banking are learned about core banking and finance concepts, and how to assess the capital demands and utilization of businesses, organizations, companies and individuals and match them to suitable financial products. Students will also study relative fields, such as business law, business statistics, management, accounting, marketing and economics, and can choose to study optional subjects offered by the Faculty of Economics & Law, or from other faculties of the university.

Career

The students in banking and finance specialization work in retail, finance, banking and insurance. They can work for the government, finance companies and multinational corporations. The range of career options depends on the subjects chosen but, given we offer open electives and a specialization in banking and finance, graduates are also able to explore several career paths, including self-employed financial planner, stockbroker for a national stock exchange, lease finance expert for a small start-up, treasury manager in a government department, entrepreneur running their own business, or investment manager for a large financial corporation.
